SIGNALS.—Second Alarm, 22 (. . . .) General Alarm, 6 blows. Recall, 9 blows. Test, 1 blow at 12 m. and 6 p. m.

General Information.

Key holders upon positive information of a fire in the vicinity, that is nearer their box than any other, will unlock the box, and if the church bells are not striking, nor the small gong in the box, they will then pull the hook down once, and let go. Do not pull the hook if the small gong or the alarm bells are striking, as in that case a box is already running, and to pull a second one would confuse the firemen After pulling a box, remain, or leave some one at the box, to direct the firemen to the exact locality of the fire.

Pulling a box a second time, or two boxes, does not (as might be supposed) accelerate the arrival of the firemen, as the bell ringers always wait until the alarm bells have completed their rounds before striking the church bells.

One stroke on the alarm bells, or two strokes, with an interval between them, only indicates that the alarm is being tested.

The Chief Engineer will use the Fire Alarm to transmit his orders to the whole department, or any details thereof.

The sign † among the streets denotes the location of Hydrants.
